Section II: Investment Objective and Risk Tolerance

1. **Select the investment objective that most accurately reflects the goals for this account:** (choose only one)
 The investment objectives are overall objectives for the entire account and may be inconsistent with a particular holding at any time. Please note that achievement of the stated investment objectives is a long-term goal for the account. These choices are listed in order from what is considered to be conservative to highest risk. There is no guarantee that the investment objective will be achieved.

A. Income with Capital Preservation. Designed as a longer term accumulation account, this is considered generally the most conservative investment objective. Emphasis is placed on generation of current income with minimal risk of capital loss. Lowering the risk generally means lowering the potential income and overall return.

B. Income with Moderate Growth. Emphasis is placed on generation of current income with a secondary focus on moderate capital growth.

C. Growth with Income. Emphasis is placed on modest capital growth with some focus on generation of current income.

D. Growth. Emphasis is placed on achieving high long-term growth and capital appreciation. There is little focus on generation of current income.

E. Aggressive Growth. Emphasis is placed on aggressive growth and maximum capital appreciation. No focus on generation of current income. This objective has a very high level of risk and is for investors with a longer time horizon.

F.Trading. Emphasis is placed on speculative transaction activity. This objective represents acceptance of an extremely high level of risk.

ATTENTION: If you select an objective and cross it out to choose another, the change must be initialed by all account holders.

Dollar Cost Averaging - Designed to potentially reduce volatility in which securities, typically mutual funds, are purchased in fixed dollar amounts at regular intervals, regardless of what direction the market is moving.

Hedging - Investing with the goal to reduce the risk of adverse price movements in a security or securities, by taking an offsetting position in a related security, such as using derivatives, options, short sales or being long in an offsetting position some of which may require additional forms and approval.
