Mid-Year 2016: An Investment Reality Check

Market volatility is alive and well in 2016. Low oil prices, China's slowing growth, the prospect of rising interest rates, the strong U.S. dollar, global conflicts--all of these factors have contributed to turbulent markets this year.

Many investors may be tempted to review their portfolios only when the markets hit a rough patch, but careful planning is essential in all economic climates. So whether the markets are up or down, reviewing your portfolio with your financial professional can be an excellent way to keep your investments on track, and midway through the year is a good time for a reality check. Here are three questions to consider.

1. How are my investments doing?

Review a summary of your portfolio's total return (minus all fees) and compare the performance of each asset class against a relevant benchmark. For stocks, you might compare performance against the S&P 500, Russell 2000, or Global Dow; for mutual funds, you might use the Lipper indexes. (Keep in mind that the performance of an unmanaged index is not indicative of the performance of any specific security, and you can't invest directly in an unmanaged index.)

Consider any possible causes of over- or underperformance in each asset class. If any over- or underperformance was concentrated in a single asset class or investment, was that consistent with the asset's typical behavior over time? Or was recent performance an anomaly that bears watching or taking action? In addition, make sure you know the total fees you are paying (e.g., mutual fund expense ratios, transaction fees), preferably as a dollar amount and not just as a percentage of assets.

2. Is my investment strategy on track?

Review your financial goals (e.g., retirement, college, house, car, vacation fund) and market outlook for the remainder of the year to determine whether your investment asset mix for each goal continues to meet your time frame, risk tolerance, and overall needs. Of course, no one knows exactly what the markets

will do in the future, but by looking at current conditions, you might identify factors that could influence the markets in the months ahead--things like inflation, interest rates, and economic growth projections from the Federal Reserve. With this broader perspective, you can then update your investment strategy as necessary.

Remember, even if you've chosen an appropriate asset allocation strategy for various goals, market forces may have altered your mix without any action on your part. For example, maybe your target was 70% stocks and 30% bonds, but now you have 80% stocks and 20% bonds. To return your asset mix back to its original allocation, you may want to rebalance your investments. This can be done by selling investments and transferring the proceeds to underrepresented asset classes, or simply by directing new contributions into asset classes that have been outpaced by others. Keep in mind that rebalancing may result in commission costs, as well as taxes if you sell investments for a profit.

Asset allocation does not guarantee a profit or protect against loss; it is a method used to help manage investment risk.

3. Am I maximizing my tax savings?

Taxes can take a significant bite out of your overall return. You can't control the markets, but you can control the accounts you use to save and invest, as well as the assets you choose to hold in those accounts. Consider the "tax efficiency" of your investment portfolio. Certain types of investments tend to result in larger tax bills. For example, investments that generate interest or produce short-term capital gains are taxed as ordinary income, which is usually a higher rate than long-term capital gains. Dividing assets strategically among taxable, tax-deferred, and tax-exempt accounts may help reduce the effect of taxes on your overall portfolio.

All investing involves risk, including the loss of principal, and there can be no guarantee that any investing strategy will be successful.

You may be able to improve your financial situation by implementing certain debt payoff strategies that can reduce the time you make payments and the total interest you pay. Before starting any debt payoff strategy (or combination of strategies), be sure you understand the terms of your debts, including any prepayment penalties.

Note: All examples are hypothetical and used for illustrative purposes only. Fixed interest rates and payment terms are shown, but actual interest rates and payment terms may change over time.

Debt Optimization Strategies

As part of improving your financial situation, you might consider reducing your debt load. A number of strategies can be used to pay off debt. However, before starting any debt payoff strategy (or combination of strategies), be sure you understand the terms of your debts, including interest rates, terms of payment, and any prepayment or other penalties.

Understand minimum payments (a starting point)

You are generally required to make minimum payments on your debts, based on factors set by the lender. Failure to make the minimum payments can result in penalties, increased interest rates, and default. If you make only the minimum payments, it may take a long time to pay off the debt, and you may have to pay large amounts of interest over the life of the loan. This is especially true of credit card debt.

Your credit card statement will indicate the amount of your current monthly minimum payment. To find the factors used in calculating the minimum payment amount each month, you need to review terms in your credit card contract. These terms can change over time.

For credit cards, the minimum payment is usually equal to the greater of a minimum percentage multiplied by the card's balance (plus interest on the balance, in some cases) or a base minimum amount (such as \$15). For example, assume you have a credit card with a current balance of \$2,000, an interest rate of 18%, a minimum percentage of 2% plus interest, and a base minimum amount of \$15. The initial minimum payment required would be \$70 [greater of $(\$2,000 \times 2\%) + (\$2,000 \times (18\% / 12))$ or \$15]. If you made only the minimum payments (as recalculated each month), it would take you 114 months (almost 10 years) to pay off the debt, and you would pay total interest of \$1,314.

For other types of loans, the minimum payment is generally the same as the regular monthly payment.

Make additional payments

Making payments in addition to your regular or minimum payments can reduce the time it takes to pay off your debt and the total interest paid. The additional payments could be made periodically, such as monthly, quarterly, or annually.

For example, if you made monthly payments of \$100 on the credit card debt in the previous example (the initial minimum payment was \$70), it would take you only 24 months to pay

off the debt, and you would pay total interest of just \$396.

As another example, let's assume you have a current mortgage balance of \$100,000. The interest rate is 5%, the monthly payment is \$791, and you have a remaining term of 15 years. If you make regular payments, you will pay total interest of \$42,343. However, if you pay an additional \$200 each month, it will take you only 11 years to pay off the debt, and you will pay total interest of just \$30,022.

Another strategy is to pay one-half of your regular monthly mortgage payment every two weeks. By the end of the year, you will have made 26 payments of one-half the monthly amount, or essentially 13 monthly payments. In other words, you will have made an extra monthly payment for the year. As a result, you will reduce the time payments must be made and the total interest paid.

Pay off highest interest rate debts first

One way to potentially optimize payment of your debt is to first make the minimum payments required for each debt, and then allocate any remaining dollars to the debts with the highest interest rates.

For example, let's assume you have two debts, you owe \$10,000 on each, and each has a monthly payment of \$200. The interest rate for one debt is 8%; the interest rate for the other is 18%. If you make regular payments, it will take 94 months until both debts are paid off, and you will pay total interest of \$10,827. However, if you make monthly payments of \$600, with the extra \$200 paying off the debt with an 18% interest rate first, it will take only 41 months to pay off the debts, and you will pay total interest of just \$4,457.

Use a debt consolidation loan

If you have multiple debts with high interest rates, it may be possible to pay off those debts with a debt consolidation loan. Typically, this will be a home equity loan with a much lower interest rate than the rates on the debts being consolidated. Furthermore, if you itemize deductions, interest paid on home equity debt of up to \$100,000 is generally deductible for income tax purposes, thus reducing the effective interest rate on the debt consolidation loan even further. However, a home equity loan potentially puts your home at risk because it serves as collateral, and the lender could foreclose if you fail to repay. There also may be closing costs and other charges associated with the loan.

Do you have a tax refund waiting for you?

Each year, millions of dollars in tax refunds go unclaimed. In March 2016, the IRS announced that it was holding \$950 million in unclaimed refunds as a result of taxpayers failing to file a federal income tax return for 2012. (Source: IR-2016-38, March 10, 2016)

You may have missed out on a potential tax refund because you earned income and had taxes withheld but weren't required to file a tax return, or if you were eligible for refundable tax credits (where the amount of the credit you qualify for exceeds the amount of tax you owe). Even if you did file a tax return, your refund may have been undeliverable if your address was incorrect.

For more information on finding and claiming missing federal income tax refunds, visit irs.gov.

Finding and Claiming Forgotten Funds

As a child, you may have dreamed about finding buried treasure, but you probably realized at an early age that it was unlikely you would discover a chest full of pirate booty. However, the possibility that you have unclaimed funds or other assets waiting for you is not a fantasy.

According to the National Association of Unclaimed Property Administrators (NAUPA), \$41.7 billion is waiting to be returned by state unclaimed property programs. So how do you find what is owed to you, even if it's not a fortune?

State unclaimed property programs

Every state has an unclaimed property program that requires companies and financial institutions to turn account assets over to the state if they have lost contact with the rightful owner for one year or longer (such as when the account has been inactive). It then becomes the state's responsibility to locate the owner. State-held property generally can be claimed in perpetuity by original owners and heirs.

For state programs, unclaimed property might include the following:

- Financial accounts
- Stocks
- Uncashed dividend or payroll checks
- Utility deposits
- Insurance payments and policies
- Trust distributions
- Mineral royalty payments
- Contents of safe-deposit boxes

To see whether you have unclaimed assets, you may have to search your state's database and the databases of states where you formerly lived or worked. It's possible that funds or assets are still waiting for you even if you moved away years ago. Fortunately, most states participate in a national database that you can search for free at MissingMoney.com.

Finding "lost" life insurance policies might take some legwork. Life insurance companies that can't locate a beneficiary must generally turn over benefits from an individual policy to state unclaimed property programs, but might not do so if the company does not know that the policy owner has passed away. If you believe that a family member owned life insurance but can't find the physical policy, you may need to look for evidence of it by searching personal records and files (assuming you have the authority to do so) or by contacting the policy owner's insurance agent, attorney, or other financial professionals.

Federal unclaimed property programs

The federal government also tracks unclaimed property, including:

- Tax refunds
- Pension funds
- Funds from failed banks and credit unions
- Funds owed investors from U.S. SEC enforcement cases
- Refunds from FHA-insured mortgages
- Unredeemed savings bonds that are no longer earning interest

Unlike states, the federal government does not have a central website for finding unclaimed money or assets, so you'll need to check a number of sources, including one of the biggest sources of unclaimed funds--the IRS--at irs.gov. To find out more about other federal programs that may hold unclaimed property, visit the NAUPA website, unclaimed.org.

Submitting a claim

To claim property, follow the instructions given, which will vary by the type of asset and where the property is held. You'll need to verify ownership, typically by providing information about yourself (such as your Social Security number and proof of address), and submit a claim form either online or by mail.

What if the listed property owner is deceased? A claim may be made by a survivor and will be payable according to state or federal law. For life insurance, you may need the full name and Social Security number of the deceased individual, a copy of the death certificate, and in some cases proof that you were the named beneficiary.

Be careful

Private companies may be paid to locate rightful owners and/or offer to help rightful owners obtain property for a fee, but legitimate companies will ask you to pay only after you receive your property. State laws limit fees companies charge, so check with your state before you sign any agreement. However, in most cases you should be able to find the same property for free by checking state or federal databases. Carefully check out anyone who contacts you, because some scammers will claim to have property or represent that they are from a government agency in order to obtain other information about you or your finances. For more information about protecting yourself, visit the Federal Trade Commission's consumer information site, consumer.ftc.gov.

Can I name a charity as beneficiary of my IRA?

Yes, you can name a charity as beneficiary of your IRA, but be sure to understand the advantages and disadvantages.

Generally, a spouse, child, or other individual you designate as beneficiary of a traditional IRA must pay federal income tax on any distribution received from the IRA after your death. By contrast, if you name a charity as beneficiary, the charity will not have to pay any income tax on distributions from the IRA after your death (provided that the charity qualifies as a tax-exempt charitable organization under federal law), a significant tax advantage.

After your death, distributions of your assets to a charity generally qualify for an estate tax charitable deduction. In other words, if a charity is your sole IRA beneficiary, the full value of your IRA will be deducted from your taxable estate for purposes of determining the federal estate tax (if any) that may be due. This can also be a significant advantage if you expect the value of your taxable estate to be at or above the federal estate tax exclusion amount (\$5,450,000 for 2016).

Of course, there are also nontax implications. If you name a charity as sole beneficiary of your IRA, your family members and other loved ones will obviously not receive any benefit from those IRA assets when you die. If you would like to leave some of your assets to your loved ones and some assets to charity, consider leaving your taxable retirement funds to charity and other assets to your loved ones. This may offer the most tax-efficient solution, because the charity will not have to pay any tax on the retirement funds.

If retirement funds are a major portion of your assets, another option to consider is a charitable remainder trust (CRT). A CRT can be structured to receive the funds free of income tax at your death, and then pay a (taxable) lifetime income to individuals of your choice. When those individuals die, the remaining trust assets pass to the charity. Finally, another option is to name the charity and one or more individuals as co-beneficiaries. (Note: There are fees and expenses associated with the creation of trusts.)

The legal and tax issues discussed here can be quite complex. Be sure to consult an estate planning attorney for further guidance.

Can I make charitable contributions from my IRA in 2016?

Yes, if you qualify. The law authorizing qualified charitable distributions, or QCDs, has recently been made

permanent by the Protecting Americans from Tax Hikes (PATH) Act of 2015.

You simply instruct your IRA trustee to make a distribution directly from your IRA (other than a SEP or SIMPLE) to a qualified charity. You must be 70½ or older, and the distribution must be one that would otherwise be taxable to you. You can exclude up to \$100,000 of QCDs from your gross income in 2016. And if you file a joint return, your spouse (if 70½ or older) can exclude an additional \$100,000 of QCDs. But you can't also deduct these QCDs as a charitable contribution on your federal income tax return--that would be double dipping.

QCDs count toward satisfying any required minimum distributions (RMDs) that you would otherwise have to take from your IRA in 2016, just as if you had received an actual distribution from the plan. However, distributions (including RMDs) that you actually receive from your IRA and subsequently transfer to a charity cannot qualify as QCDs.

For example, assume that your RMD for 2016 is \$25,000. In June 2016, you make a \$15,000 QCD to Qualified Charity A. You exclude the \$15,000 QCD from your 2016 gross income. Your \$15,000 QCD satisfies \$15,000 of your \$25,000 RMD. You'll need to withdraw another \$10,000 (or make an additional QCD) by December 31, 2016, to avoid a penalty.

You could instead take a distribution from your IRA and then donate the proceeds to a charity yourself, but this would be a bit more cumbersome and possibly more expensive. You'd include the distribution in gross income and then take a corresponding income tax deduction for the charitable contribution. But the additional tax from the distribution may be more than the charitable deduction due to IRS limits. QCDs avoid all this by providing an exclusion from income for the amount paid directly from your IRA to the charity--you don't report the IRA distribution in your gross income, and you don't take a deduction for the QCD. The exclusion from gross income for QCDs also provides a tax-effective way for taxpayers who don't itemize deductions to make charitable contributions.
