For the first time since April 2020, the COVID-19 pandemic was not the

to rise during the next 12 months, reported Nicholas Jasinski of Barron's,

most pressing concern for professional money managers. That spot was filled by inflation. Ninety-three percent of those surveyed expect inflation

and that could affect stock prices. Jasinski reported:

So, what were managers most worried about?

"...higher bond yields mean higher borrowing costs, which could hinder the recovery and weigh on corporate earnings. Plus, a higher discount rate produces a lower present value for assets like stocks. And, when Treasuries produce enough yield, there's greater competition for stocks.'

The discount rate is the Fed's rate for lending to other banks. One place to look for signs of inflation is bond yields. Recently, yields on U.S. Treasury bonds have been moving higher despite efforts by the Federal Reserve to keep them down, reported Lisa Beilfuss of *Barron's*.

It's possible the bond market is pushing yields up because bond investors see inflation ahead. The AP's Stan Choe and Alex Veiga explained:

"Inflation means future payments from bonds won't buy as much –

and their prices fall. That pushes up their yield." Major U.S. stock indices finished last week lower.

(The one-year numbers in the scorecard are noteworthy. They reflect the strong recovery of U.S. stocks from last year's coronavirus downturn to

The world happiness report is out – and it was surprising. COVID-19
has disrupted just about every aspect of people's lives – work, home,
family, friends, and health – in every country of the world. Knowing this, it
seems logical people would be less happy in 2020 than they had been in
previous years. However, the findings of <i>The World Happiness Report</i> tell
a different and more complex story. The authors explained:

"Many strands of data have been pieced together to produce a picture of almost astonishing resilience...Although there were significant increases in average sadness and worry, we found that overall life evaluations, and happiness rankings, were surprising stable. The top countries before the pandemic remained the top countries in 2020, so there is little change in

such as emotions and unemployment, were offset by positive changes in other variables, such as trust and generosity. The remarkable stability of happiness may also reflect the fact some of population groups are not normally included in surveys - people who are homeless, in nursing homes, hospitals, prisons, and refugee camps –

were also some those hit hardest by the virus.

The Economist explained:

old."

For the world as a whole, it appears negative changes in some variables,

"[In Britain], and in other rich countries, the age profile of happiness before the pandemic struck was roughly U-shaped when plotted on a

graph. People began their adult lives in a cheerful state. They became glummer in middle age. Then, after about the age of 50, they started to become happier again...Today the pattern is an upward slope. The young are less satisfied than the middle-aged, who are less satisfied than the

So, which countries were happiest in 2020? The top 10 included:

There was another notable aspect of the study. Young people were

significantly less happy in 2020 than they have been in previous years.
