

2017 Marks My 40th Year in Business

I thought it would be interesting to take a look back in time & share
with you some important milestones...

I began preparing tax returns in 1977. My first office consisted of a briefcase, clipboard, stapler, & my four function Texas Instrument calculator. The items pictured here are all original and on display in my office. I would complete returns on client's kitchen tables, coffee tables, in their basements and I even prepared some returns in my car.

As my business grew, I moved to a small, two room office suite in the Old Town Square Professional Building in Schaumburg. In December of 1990, the building was partially destroyed by fire. As you can see by this photo, the entrance was boarded up. Our section of the building only suffered smoke damage. This was my office from 1985 till 1992.

My first computer was an IBM system 2 model 60. I bought it in January 1987 for about \$6,000. It weighs 40 lbs! At that time, it was referred to as the "Ferrari" of computers. This computer completely transformed the tax preparation process for me. I have it on display in my office.

This photo is of the ribbon cutting of our second office in the Kingsport Plaza in Schaumburg. Mayor, Al Larson was there along with my wife, Denise, my two children, Sharyn & Michael and my in-laws. This office was our home from 1992 till 2004. It was at this office that we hired Christine Kurek in 1996.

This photo was taken at the groundbreaking of our present office, in Roselle, Il. My son Michael designed the office layout. We moved in on December 7, 2004. A major component of it's design included measures for client information security. It also provided us with the needed space for our growing business.

**After Forty Years, I'm still doing what I love
to do because of you!!**

With Sincere Thanks,

Michael A. Procaccio
