The Markets

Does performance tell the whole story?

American stock markets have delivered some exceptional performance in recent years. Just look at the Standard & Poor's 500 (S&P 500) Index. *Barron's* reported the S&P 500, including reinvested dividends, has returned 215 percent since April 30, 2009. The index is currently trading 50 percent above its 2007 high.

The rest of the world's stocks, as measured by the MSCI EAFE Index, which includes stocks from developed countries in Europe, Australia, and the Far East, returned 97 percent in U.S. dollars during the same period. At the end of April, the MSCI EAFE Index was 20 percent below its 2007 high.

If you subscribe to the 'buy low, sell high' philosophy of investing then these performance numbers may have you thinking about portfolio reallocation. However, performance doesn't tell the full story.

For example, there's a significant difference between the types of companies included in the two indices. At the end of April, Information Technology stocks comprised 22.5 percent of the S&P 500 Index and just 5.7 percent of the MSCI EAFE Index. Financial stocks accounted for 14.1 percent of the S&P 500 and 21.4 percent of MSCI EAFE.

It's important to dig beneath the surface and understand the drivers behind performance before making assumptions or changing portfolio allocations.

Even so, European stocks have the potential to deliver decent performance this year, according to *Barron's*. "The case for a revival in European stocks, particularly the Continent's many multinationals, rests in large part on expectations for improving global growth... This year Europe's GDP is expected to increase by about 2 percent, after growing 1.7 percent in 2016 – better than the U.S.'s 1.6 percent."

Last week, the S&P 500 Index moved slightly lower.

Data as of 5/12/17	1-Week	Y-T-D	1-Year	3-Year	5-Year	10-Year
Standard & Poor's 500 (Domestic Stocks)	-0.4%	6.8%	15.8%	8.0%	12.3%	4.8%
Dow Jones Global ex-U.S.	0.6	11.4	15.6	-0.6	4.9	-1.1
10-year Treasury Note (Yield Only)	2.3	NA	1.8	2.5	1.8	4.7
Gold (per ounce)	0.3	6.2	-3.8	-1.8	-4.6	6.3
Bloomberg Commodity Index	1.0	-4.6	-1.5	-15.0	-8.9	-7.0
DJ Equity All REIT Total Return Index	-1.4	1.2	1.9	8.2	9.7	4.9

S&P 500, Dow Jones Global ex-US, Gold, Bloomberg Commodity Index returns exclude reinvested dividends (gold does not pay a dividend) and the three-, five-, and 10-year returns are annualized; the DJ Equity All REIT Total Return Index does include reinvested dividends and the three-, five-, and 10-year returns are annualized; and the 10-year Treasury Note is simply the yield at the close of the day on each of the historical time periods.

THE HERD OF UNICORNS IS GROWING. Since 1996, the value of companies listed on American stock exchanges has increased from 105 percent of gross domestic product (GDP) to 136 percent of GDP, according to *The Economist*. (GDP is the value of all goods and services produced in the United States.)

During the same period, the number of companies listed on American exchanges has fallen from 7,322 to 3,671.

This fact might lead you to surmise that a few businesses have become dominant in their industries, but that's not the case. Many companies are choosing to remain private rather than issue shares through an Initial Public Offering (IPO) and then trade on an exchange. *Financial Times* explained:

“Over the past 10 years the number of initial public offerings in the United States, and the total amount of equity raised by them, are way down on historical averages. If these had held there would have been more than 3,000 new public companies in the past decade. Instead, we have had fewer than half the number of IPOs.”

Why don't the leaders of vibrant young companies want to issue shares? There may be several reasons:

- Technology-intensive businesses may need less capital.
- It's relatively easy to raise money in private equity markets.
- Regulatory requirements for public companies increase litigation risk from securities class actions.
- Private markets are better at allowing companies to take a long-term perspective.

The reluctance to take companies public has fattened the world's herd of unicorns – private firms worth over \$1 billion that are not subject to public-company standards for accounting and disclosure. There are currently about 100 of them.

Weekly Focus – Think About It

“It may be possible to gild pure gold, but who can make his mother more beautiful?”

--Mahatma Gandhi, Leader, Indian independence movement
