

Lessons in Long-Term Investing

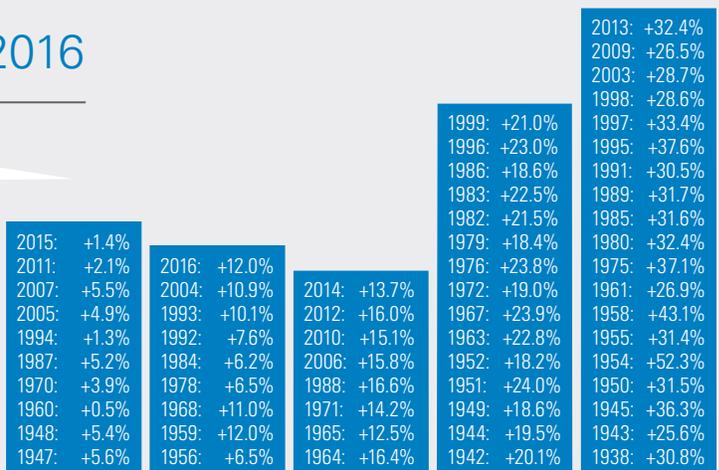

LONG-TERM INVESTING HAS HAD REWARDS

Positive versus negative average annual returns for the S&P 500 (1937–2016)

The odds have favored the investor who takes a long-term approach. Though the stock market's returns vary tremendously, they were positive in 76% of the years shown.

10.3% Average return: 1937–2016

61 positive years | 19.4% average positive return

WHY IT CAN PAY TO STAY INVESTED

Stocks are generally more volatile than fixed income, and returns can vary greatly from year to year. As a result, stock investors may be tempted to abandon a long-term strategy when the markets are down.

S&P 500 Index: Annual total returns 1997–2016 (%) ending on December 31

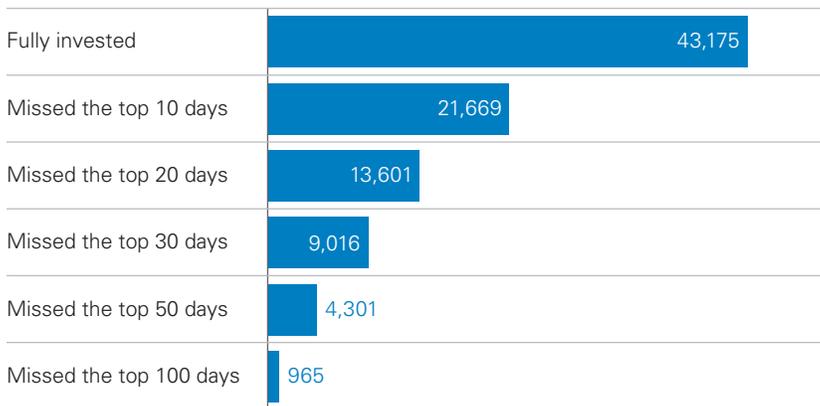

Although stocks have averaged a 10.3% return since 1937, the return can be far higher or lower in any single year.

Long-term investors should consider the pattern of returns over the last 20 years and not be thrown off-course by the market's ups and downs along the way: steady, continuous growth is the exception, not the rule.

\$10,000 Investment made to S&P 500 Index from January 2, 1997–December 31, 2016

Price-only performance

Pulling money out of stocks in down periods can reduce long-term returns, because when the market bounces back, it can happen quickly and suddenly. Missing even a few trading days could mean missing some of the market's biggest gains.

There were 5,052 trading days during this 20-year period...yet missing only 10 of them would reduce an investor's returns by over 50%.
