From your Retirement Coaches and Advisors

Pick Your Plastic: Debit or Credit?

According to a Federal Reserve study, Americans use debit cards more often than credit cards, but the total value and the average value of credit card transactions are higher than those of debit card transactions.

While consumers made 69.5 billion transactions using debit cards, the total value of these transactions was \$2.56 trillion, with an average transaction value of \$37. Credit card usage resulted in 33.8 billion transactions, with a total value of \$3.16 trillion, and a \$93 average transaction value.¹

This reflects fundamental differences. A debit card acts like a plastic check and draws directly from your checking account, whereas a credit card transaction is a loan that remains interest-free only if you pay your monthly bill on time. For this reason, people may use a debit card for regular expenses and a credit card for "extras." However, when deciding which card to use, you should be aware of other differences.

Fraud protection

In general, you are liable for no more than \$50 in fraudulent credit card charges. For debit cards, a \$50 limit applies only if a lost card or PIN is reported within 48 hours. The limit is \$500 if reported within 60 days, with unlimited liability after that. A credit card may be safer in higher-risk situations, such as when shopping online, when the card will leave your sight in a restaurant, or when you are concerned about a card reader. If you regularly use a debit card in these situations, you may want to maintain a lower checking balance and keep most of your funds in savings.

Merchant disputes

You can dispute a credit card charge before paying your bill and shouldn't have to pay it while the charge is under dispute. Disputing a debit card charge can be more difficult when

the charge has been deducted from your account, and it may take some time before the funds are returned.

Rewards and extra benefits

Debit cards offer little or no additional benefits, while some credit cards offer cash-back rewards, and major cards typically include extra benefits such as travel insurance, extended warranties, and secondary collision and theft coverage for rental cars (up to policy limits). Of course, if you do not pay your credit card bill in full each month, the interest you pay can outweigh any financial rewards.

Credit history

Using a credit card responsibly can help you build a positive credit history because your usage is reported to credit reporting agencies. A debit card has no effect on your credit.

Money management

Using a debit card helps ensure that you don't overspend. Because purchases are deducted right away from your checking account, you aren't in the dark about how much you're spending. You can quickly check your balance online or at an ATM, and see which purchases are pending.

A credit card offers you the flexibility of tracking your monthly expenses on one bill, which can help you establish and stick to a realistic budget. A credit card can also be used in emergencies.

Considering the additional protections and benefits, a credit card may be a better choice in some situations — but only if you pay your monthly bill on time. The good news is, you don't have to choose just one option.

Investing to Save Time Boosts Happiness Returns

"Time famine" is the feeling of being overwhelmed by the demands of work and life. Also known as time scarcity and time stress, this pressure is a "critical factor" in the rising rates of obesity.

Source: "Buying Time Promotes Happiness," PNAS, July 24, 2017

The more money you make, the more valuable you perceive your time to be — and the more time-strapped you may feel, according to University of British Columbia psychology professor Elizabeth Dunn.¹ So wouldn't it stand to reason that if you use some of your hard-earned money to buy yourself more time — for example, by paying someone to clean your house or mow your lawn — you might achieve a greater level of happiness? Indeed, that was the primary finding in a series of studies by Professor Dunn and other researchers published in the Proceedings of the National Academy of Sciences (PNAS).²

The discovery

The study's authors surveyed 6,000 individuals at diverse income levels in multiple countries, including the United States, Canada, the Netherlands, and Denmark. The surveys queried participants about whether they spent money on a monthly basis to hire others to take care of unpleasant or time-consuming daily tasks or chores — such as cleaning, yard work, cooking, and errand-running — and if so, how much they spent. Respondents were also asked to rate their "satisfaction with life" and report demographic information, such as their income level and whether they were married and had children.

Researchers found that across all national samples, 28.2% of respondents spent an average of about \$148 per month to outsource disliked tasks, while in the United States, 50% of respondents spent an average of \$80 to \$99 on services that save time. Across all studies, those who spent money to outsource disliked tasks and/or save time had a stronger life satisfaction rating. Findings were consistent across income spectrums; in fact, in the United States, researchers found a stronger correlation among the less-affluent respondents. The authors noted, however, that their studies did not include enough people at the lowest end of the income spectrum to attribute similar findings to this group.

Of course, correlation does not necessarily indicate causality, so the researchers designed a follow-up experiment to further test their hypothesis.

In this experiment, researchers gave a group of 40 adults \$80 each to spend over the course of two weekends. During the first weekend, they were to spend \$40 on something that would save them time, such as ordering groceries online and having them delivered. On the second weekend, they were directed to spend \$40 on a nice material purchase, such as clothes, board games, or a bottle of wine. On

average, those who spent money to save time reported better moods at the end of the day than those who purchased material goods. And according to the researchers, over time, the effect of regular mood boosts can add up to greater overall satisfaction with life.

In a third study, researchers asked respondents how they would spend an extra \$40. Just 2% indicated they would use the unexpected bonus to invest in time-saving services.

Perhaps most surprising of all the findings? Researchers polled 800 millionaires from the Netherlands about whether they spent money to save time. Despite the fact that these individuals could readily afford to hire others to take care of time-consuming tasks, only about half of them reported doing so on a monthly basis. Researchers surmise that the reason might be because such individuals feel guilty or don't want to be perceived as lazy for outsourcing chores they can easily do themselves.

The lesson

"If you have a lot of money and a lot of nice stuff, but you're spending your time doing things that you dislike, then your minute-to-minute happiness and overall happiness is likely to be pretty low," said Dunn in an interview about the research.³ In the PNAS report, the study's authors contend that this may be especially true for women:

"Within many cultures, women may feel obligated to complete household tasks themselves, working a 'second-shift' at home, even when they can afford to pay someone to help. In recent decades, women have made gains, such as improved access to education, but their life satisfaction has declined; increasing uptake of time-saving services may provide a pathway toward reducing the harmful effects of women's second shift."

The bottom line? If you can afford it, don't shy away from spending money to save time. Doing so is an investment that provides immeasurable returns in the form of overall well-being.

Open communication and teamwork are especially important when it comes to saving and investing for retirement.

Marriage and Money: Taking a Team Approach to Retirement

Now that it's fairly common for families to have two wage earners, many husbands and wives are accumulating assets in separate employer-sponsored retirement accounts. In 2018, the maximum employee contribution to a 401(k) or 403(b) plan is \$18,500 (\$24,500 for those age 50 and older), and employers often match contributions up to a set percentage of salary.

But even when most of a married couple's retirement assets reside in different accounts, it's still possible to craft a unified retirement strategy. To make it work, open communication and teamwork are especially important when it comes to saving and investing for retirement.

Retirement for two

Tax-deferred retirement accounts such as 401(k)s, 403(b)s, and IRAs can only be held in one person's name, although a spouse is typically listed as the beneficiary who would automatically inherit the account upon the original owner's death. Taxable investment accounts, on the other hand, may be held jointly.

Owning and managing separate portfolios allows each spouse to choose investments based on his or her individual risk tolerance. Some couples may prefer to maintain a high level of independence for this reason, especially if one spouse is more comfortable with market volatility than the other.

However, sharing plan information and coordinating investments might help some families build more wealth over time. For example, one spouse's workplace plan may offer a broader selection of investment options, or the offerings in one plan might be somewhat limited. With a joint strategy, both spouses agree on an appropriate asset allocation for their combined savings, and their contributions are invested in a way that takes advantage of each plan's strengths while avoiding any weaknesses.

Asset allocation is a method to help manage investment risk; it does not guarantee a profit or protect against loss.

Spousal IRA opportunity

It can be difficult for a stay-at-home parent who is taking time out of the workforce, or anyone

who isn't an active participant in an employer-sponsored plan, to keep his or her retirement savings on track. Fortunately, a working spouse can contribute up to \$5,500 to his or her own IRA and up to \$5,500 more to a spouse's IRA (in 2018), as long as the couple's combined income exceeds both contributions and they file a joint tax return. An additional \$1,000 catch-up contribution can be made for each spouse who is age 50 or older. All other IRA eligibility rules must be met.

Contributing to the IRA of a nonworking spouse offers married couples a chance to double up on retirement savings and might also provide a larger tax deduction than contributing to a single IRA. For married couples filing jointly, the ability to deduct contributions to the IRA of an active participant in an employer-sponsored plan is phased out if their modified adjusted gross income (MAGI) is between \$101,000 and \$121,000 (in 2018). There are higher phaseout limits when the contribution is being made to the IRA of a nonparticipating spouse: MAGI between \$189,000 and \$199,000 (in 2018).

Thus, some participants in workplace plans who earn too much to deduct an IRA contribution for themselves may be able to make a deductible IRA contribution to the account of a nonparticipating spouse. You can make IRA contributions for the 2018 tax year up until April 15, 2019.

Withdrawals from tax-deferred retirement plans are taxed as ordinary income and may be subject to a 10% federal income tax penalty if withdrawn prior to age 59½, with certain exceptions as outlined by the IRS.

Savings Gap

Despite career gains, women tend to retire with fewer assets than men.

Can I convert my traditional IRA to a Roth IRA in 2018?

If you've been thinking about converting your traditional IRA to a Roth IRA, this year may be an appropriate time to do so. Because federal income

tax rates were reduced by the Tax Cuts and Jobs Act passed in December 2017, converting your IRA may now be "cheaper" than in past years.

Anyone can convert a traditional IRA to a Roth IRA in 2018. There are no income limits or restrictions based on tax filing status. You generally have to include the amount you convert in your gross income for the year of conversion, but any nondeductible contributions you've made to your traditional IRA won't be taxed when you convert. (You can also convert SEP IRAs, and SIMPLE IRAs that are at least two years old, to Roth IRAs.)

Converting is easy. You simply notify your existing IRA provider that you want to convert all or part of your traditional IRA to a Roth IRA, and they'll provide you with the necessary paperwork to complete. You can also transfer or roll your traditional IRA assets over to a new IRA provider and complete the conversion there.

If you prefer, you can instead contact the trustee/custodian of your traditional IRA, have the funds in your traditional IRA distributed to you, and then roll those funds over to your new Roth IRA within 60 days of the distribution. The income tax consequences are the same regardless of the method you choose.¹

The conversion rules can also be used to contribute to a Roth IRA in 2018 if you wouldn't otherwise be able to make a regular annual contribution because of the income limits. (In 2018, you can't contribute to a Roth IRA if you earn \$199,000 or more and are married filing jointly, or if you're single and earn \$135,000 or more.) You can simply make a nondeductible contribution to a traditional IRA and then convert that traditional IRA to a Roth IRA. (Keep in mind, however, that you'll need to aggregate the value of all your traditional IRAs when you calculate the tax on the conversion.) You can contribute up to \$5,500 to all IRAs combined in 2018, or \$6,500 if you're 50 or older.

1 If you choose to receive the funds first and don't transfer the entire amount, a 10% early withdrawal penalty may apply to amounts not converted.

What is gross domestic product, and why is it important to investors?

GDP, or gross domestic product, measures the value of goods and services produced by a nation's

economy less the value of goods and services used in production. In essence, GDP is a broad measure of the nation's overall economic activity and serves as a gauge of the country's economic health. Countries with the largest GDP are the United States, China, Japan, Germany, and the United Kingdom.

GDP generally provides economic information on a quarterly basis and is calculated for most of the world's countries, allowing for comparisons among various economies. Important information that can be gleaned from GDP includes:

- A measure of the prices paid for goods and services purchased by, or on behalf of, consumers (personal consumption expenditures), including durable goods (such as cars and appliances), nondurable goods (food and clothing), and services (transportation, education, and banking)
- Personal (pre-tax) and disposable (after-tax) income and personal savings

• Residential (purchases of private housing) and nonresidential investment (purchases of both nonresidential structures and business equipment and software, as well as changes in inventories)

- Net exports (the sum of exports less imports)
- Government spending on goods and services

GDP can offer valuable information to investors, including whether the economy is expanding or contracting, trends in consumer spending, the status of residential and business investing, and whether prices for goods and services are rising or falling. A strong economy is usually good for corporations and their profits, which may boost stock prices.

Increasing prices for goods and services may indicate advancing inflation, which can impact bond prices and yields. In short, GDP provides a snapshot of the strength of the economy over a specific period and can play a role when making financial decisions. All investing involves risk, including the possible loss of principal, and there is no guarantee that any investment strategy will be successful.
