

Streamline Your Operations with a Cloud-Based Hosted PBX Voice Communications system

Hosted PBX is becoming the mainstream choice for most organizations. Does using high-speed Internet facing circuits instead of analog phone lines sound intimidating? It doesn't have to. Dovetail Networks partners with the world's leading Hosted PBX providers, and can address concerns about security, redundancy, quality of experience, and more.

Today every organization, regardless of size or industry, has sophisticated communications tools at its core. These tools can often be expensive and complicated, requiring an upfront investment of capital and regular support staff. What if there was a way of achieving this same level of integration and collaboration that was simpler, more flexible and more cost effective?

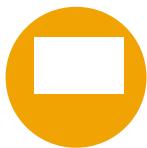

A Hosted PBX system can help make this a reality. Hosted PBX promises seamless integrations with business processes at a lower price-point than traditional premises-based solutions.

WHY CHOOSE Hosted PBX?

- ✓ Immediate cost savings and optimized billing
- ✓ Efficient collaboration over multiple devices
- ✓ Enhanced mobile and remote user experience
- ✓ Flexible and scalable to meet your needs
- ✓ Fast implementation and easy upgrades
- ✓ IT staff can prioritize other business needs
- ✓ Improved customer contact experience
- ✓ Faster third-party integrations
- ✓ Business continuity and security
- ✓ Faster problem solving with expert tech support

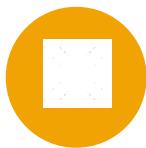

WHY WORK WITH US?

- ✓ We are carrier agnostic & can deliver multiple options
- ✓ Will learn your business structure and goals
- ✓ Will understand your IT infrastructure
- ✓ Will determine the optimal solution
- ✓ Will research to source the optimal supplier
- ✓ Will implement and support the selected solution
- ✓ After implementation support including customer service and escalations
- ✓ Be integrated as part of your organization's ecosystem

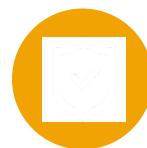

MOBILITY

Hosted PBX means that your employees can get the same unified communication experience regardless of whether they're in the office, working remotely, or logging in from a mobile device. Everyone gets the same interface, which boosts productivity.

SCALABILITY

Hosted PBX services are scalable to match the ebb and flow of the business. This provides the customer the assurance their communication requirements are nimble. Add additional users in minutes instead of days or weeks.

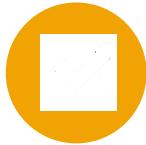

SURVIVABILITY

Hosted PBX provides business continuity because telecom traffic can be re-routed very quickly during a power outage, network outage or server failure. One missed call can equate to lost revenue, but Hosted PBX can reduce, and possibly eliminate missed calls completely.

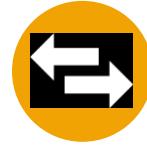

REDUCED EXPENSES

Because it runs in the cloud, Hosted PBX solutions come with minimal capital expenditure. There's no need to lease new phones or integrate new hardware. It's even possible to reduce operating costs because you don't have to invest in on-site infrastructure, pay increased energy bills or configure onsite phone system hardware.

SIMPLE ADMINISTRATION

Hosted PBX web-based portals allow on-demand movement dictated by the client. Admin credentials authorize the ability to add, modify, and delete users. It also allows the upgrading or downgrading of subscription needs. Since this is real-time, the client does not have to call the provider for assistance.

INTER-OPERABILITY

Hosted PBX systems are all built on a software stack that can be integrated through APIs into your existing custom or packaged applications to improve end-user efficiency and your customer experience.

ABOUT US

Dovetail Networks designs and delivers data, internet & voice communications solutions and services that help organizations execute on their strategic goals.

Our focus? Every business is unique, so we start with listening to the needs of our clients, and then exceed those needs in every way.
