

Objective

Seeks current income and preservation of capital primarily through a diversified portfolio of quality fixed income securities and dividend-paying equities.

Figures shown are past results for Class F-2 shares and are not predictive of results in future periods. Current and future results may be lower or higher than those shown. Prices and returns will vary, so investors may lose money. Investing for short periods makes losses more likely. Returns shown at net asset value (NAV) have all distributions reinvested. If a sales charge had been deducted, the results would have been lower. For current information and month-end results, visit capitalgroup.com.

Returns for model portfolio, based on underlying fund allocations, for Class F-2 shares 2018-2020

Bond ratings, which typically range from AAA/Aaa (highest) to D (lowest), are assigned by credit rating agencies such as Standard & Poor's, Moody's and/or Fitch, as an indication of an issuer's creditworthiness. If agency ratings differ, the security will be considered to have received the highest of those ratings, consistent with the fund's investment policies. Securities in the Unrated category have not been rated by a rating agency; however, the investment adviser performs its own credit analysis and assigns comparable ratings that are used for compliance with fund investment policies.

As of June 30, 2021

American Funds Strategic Bond Fund offers fee waivers or reimbursements, which can impact the 30-day SEC yield.

Important disclosures

Investors should carefully consider investment objectives, risks, charges and expenses. This and other important information is contained in the fund prospectuses and summary prospectuses, which can be obtained from a financial professional and should be read carefully before investing.

Investment results assume all distributions are reinvested and reflect applicable fees and expenses. Expense ratios for the model are weighted averages of the underlying funds as of the most recent prospectus. Expense ratios for the underlying funds are as of the most recent prospectus. When applicable, investment results reflect fee waivers and/or expense reimbursements, without which the results would have been lower. Please see [capitalgroup.com](https://www.capitalgroup.com) for more information. Class F-2 shares were first offered on 8/1/08. The investment adviser is currently waiving and reimbursing a portion of other expenses for American Funds Strategic Bond Fund through at least March 1, 2022. Net expense ratios reflect the waiver and reimbursement, without which they would have been higher. The adviser may elect at its discretion to extend, modify or terminate the waiver and reimbursement at that time. Please see the fund's most recent prospectus for details. Class F-2 share results prior to the date of first sale are hypothetical based on results of the original share class of the fund without a sales charge, adjusted for typical estimated expenses. Results for certain funds with an inception date after 8/1/08 also include hypothetical returns because those funds' Class F-2 shares sold after the funds' date of first offering. Please see [capitalgroup.com](https://www.capitalgroup.com) for more information on specific expense adjustments and the actual dates of first sale.

Model results reflect changes, if any, in the underlying fund allocations (which are rebalanced monthly) over the model's lifetime. Rebalancing approaches may differ depending on where the account is held.

Portfolios are actively monitored; allocations and funds may change.

Capital Group provides the American Funds Model Portfolios to financial intermediaries who may or may not recommend the model portfolios to clients. These portfolios consist of an allocation of funds for investors to consider and are not intended to be investment recommendations. The portfolios are asset allocations designed for individuals with different time horizons, investment objectives and risk profiles. Allocations may change and may not achieve investment objectives. The intermediary may include cash allocations in the model, which are not reflected here. Capital Group does not have investment discretion or authority over investment allocations in client accounts. Investors should talk to their financial professional for information on other investment alternatives that may be available. In making investment decisions, investors should consider their other assets, income and investments. Visit [capitalgroup.com](https://www.capitalgroup.com) for current allocations.

- ¹ Totals may not reconcile due to rounding. Holdings are weighted averages of the model portfolio's underlying funds.
- ² Source for industry average expense ratios: Lipper, based on institutional load funds, excluding funds of funds. The industry average expense ratio is a weighted average of the underlying funds' Lipper averages as of the most recent fiscal year-ends available as of 6/30/21. The Lipper average indexes for the underlying funds are: Growth & Income (AMRFX); Balanced (AMBFX); Income (Mixed Equity) (AMEFX); Core Bond (ABNFX); Core Plus Bond (ANBFX); Short-Intermediate Investment-Grade Debt (IBAFX); and Short U.S. Government (SBFFX).
- ³ Fixed income credit quality breakdown for the model portfolios reflect percent of net assets and are based on holdings of the underlying funds, as of date shown.
- ⁴ Dates for market downturns are based on price declines of 10% or more, from peak to trough, in the unmanaged S&P 500 Index, without dividends reinvested. Returns of the index and model portfolios are based on total returns.
- ⁵ Cash and equivalents includes short-term securities, accrued income and other assets less liabilities. It may also include investments in money market or similar funds managed by the investment adviser or its affiliates that are not offered to the public.
- ⁶ The American Funds Conservative Income Model Portfolio index blend is 20% Standard & Poor's 500 (S&P 500), 50% Bloomberg Barclays U.S. Aggregate and 30% Bloomberg Barclays U.S. Government/Credit (1-3 years, ex BBB). S&P 500 is a market-capitalization-weighted index based on the results of approximately 500 widely held common stocks. Bloomberg Barclays U.S. Aggregate Index represents the U.S. investment-grade fixed-rate bond market and consists of U.S. Treasury and government-related bonds, corporate securities and asset-backed securities. Bloomberg Barclays U.S. Government/Credit (1-3 years, ex BBB) Index measures market results of debt securities issued by the U.S. Treasury, government agencies and corporate or foreign issuers guaranteed by the U.S. government, with maturities of one to three years, and excludes BBB-rated securities. The indexes are unmanaged, and their results include reinvested dividends and/or distributions but do not reflect the effect of sales charges, commissions, account fees, expenses or U.S. federal income taxes. There may have been periods when the results lagged the index(es). Certain market indexes are unmanaged and, therefore, have no expenses. Investors cannot invest directly in an index. View returns for the American Funds Model Portfolios, underlying funds and their relevant index/index blends at [capitalgroup.com](https://www.capitalgroup.com)
- ⁷ The model's yield is the weighted average of the underlying funds' annualized 30-day SEC yields at NAV. The 30-day SEC yield reflects the rate at which the fund is earning income on its current portfolio of securities.

The portfolio's risks are directly related to the risks of the underlying funds, as described below. There are expenses associated with the underlying funds in addition to any fees charged by the intermediary. Investing outside the United States involves risks such as currency fluctuations, periods of illiquidity and price volatility, as more fully described in the prospectus. These risks may be heightened in connection with investments in developing countries. The return of principal for bond funds and for funds with significant underlying bond holdings is not guaranteed. Investments are subject to the same interest rate, inflation and credit risks associated with underlying bond holdings. Bond prices and a bond fund's share price will generally move in the opposite direction of interest rates. Lower rated bonds are subject to greater fluctuations in value and risk of loss of income and principal than higher rated bonds.
