# SAMPLE Personal Financial Plan for John R. and Susan M. Smith 

May 1, 2023<br>Prepared by Kimberly K. Doleman Investment Advisor Representative / Registered Representative ****WORKING DRAFT ONLY****

## Important Disclosures

This Personal Financial Plan is being provided to you by your Registered Representative / Investment Advisor for information purposes only. Past performance is not a guarantee of future results. Actual results may vary. The information contained in this report is not to be construed as advice and should not be confused as any sort of advice. Investors should not consider this plan as the only single factor in making their investment decision and should talk to their Representative.

This Personal Financial Plan does not reflect the views of Portside Wealth Group, LLC or Concorde Investment Services, LLC. Financial plans are based on your financial situation at the time we present the plan to you, and on the financial information you provide to us. There may be several "what if" scenarios based on discussions with your Registered Representative / Investment Advisor Representative included in this plan. You must promptly notify our firm if any of your financial situations, goals, objectives, needs, or "what if" scenarios change. Additional information provided has been gathered from reliable sources, however, cannot be guaranteed to be accurate. Talk to your Registered Representative / Investment Advisor Representative before acting on this plan.

## Money Tree Software Important Disclosures

This presentation provides a general overview of some aspects of your personal financial position. It is designed to provide educational and / or general information and is not intended to provide specific legal, accounting, investment, tax or other professional advice. For specific advice on these aspects of your overall financial plan, consult with your professional advisors. Asset or portfolio earnings and / or returns shown, or used in the presentation, are not intended to predict nor guarantee the actual results of any investment products or particular investment style.

IMPORTANT: The projections or other information generated by Money Tree's Prosper Program regarding the likelihood of various investment outcomes are hypothetical in nature, do not reflect actual investment results and are not guarantees of future results. Additionally, it is important to note that the information in this report is based upon financial figures input on the date above; results provided may vary with subsequent uses and over time.

## Release of all Liability for Planning Outcomes

Your signature below indicates your full understanding of the above disclosure and releases all parties involved in this planning process from all liability in the event your financial plan does not provide the result as illustrated.

## Assumptions

Retire @65-Assume 6\% ROR - SAMPLE
Prepared for John R. and Susan M. Smith
The following basic information was used in preparing the reports. Other assumptions may have been used in preparation of this projection which are not shown here.

## Basic Plan Assumptions:

|  | John | Susan |
| :--- | ---: | ---: |
| Current Age | 52 | 55 |
| Retirement Age | 65 | 65 |
| Annual Salary | $\$ 85,000$ | $\$ 105,000$ |
| Self employed income |  |  |
| Age to start Soc. Sec. benefits | 66 | 66 |

## Personal Savings and Investment Accounts

This section includes amounts in your current savings and investment accounts.

| Asset Accounts | Amount | Monthly Additions | Interest Rate | Dividend Rate | Cap Gain Rate | Appr. <br> Rate |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Taxable (at ordinary rates) | \$120,000 |  | 6.00 |  |  |  |
| Equity \& other | 12,000 |  | 0.06 | 0.06 | 0.06 | 0.06 |
| Tax-deferred |  |  | 6.00 |  |  |  |
| Tax-free |  |  | 6.00 |  |  |  |

## Retirement Accounts:

This group includes tax deductible retirement plans like IRA, 401(k), profit sharing, etc.

|  | Amount |  | Additions <br> Pers./Comp. |  | Rate of Ret. |
| :--- | ---: | ---: | ---: | ---: | ---: |
|  | 60,000 |  | $1067 / 362$ |  | 6.00 |
| John | 11,050 |  | 300 | 6.00 |  |
| Susan | 130,000 | $950 / 362$ |  | 6.00 |  |

Roth IRA and Roth 401(k) Accounts:

| John | 22,689 | 300 | 6.00 |
| :--- | :--- | :--- | :--- |

## Assumptions Cont.

Retire @65-Assume 6\% ROR - SAMPLE

## Current Living Expenses:

| Personal expenses * Insurance premiums | Average Per year $\$ 78,400$ | \$6,533 | Basic personal monthly expense amounts at selected ages * |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $\$ 78,400$ |  | Age | Amount | Inflation |
| Debt payments | 31,056 | 2,588 | 52 | 5,733 | 2.48\% |
| Asset account deposits |  |  | 57 | 5,733 | 2.48\% |
| Ret. account deposits | 31,400 | 2,617 | 62 | 4,400 | 1.52\% |
| Other exp. \& stock opt. |  |  | 67 | 4,400 | 1.52\% |
| Itemized deductions |  |  | 72 | 4,400 | 1.52\% |
| Income tax and FICA | 38,803 | 3,234 |  |  |  |
| Total expenses | \$179,659 | \$14,972 |  | dollars, does no ce, debts, taxes, |  |

|  |  | Amount | Per month |
| :---: | :---: | :---: | :---: |
| Auto Loans |  |  |  |
| Credit Cards |  | 23,621 | 400 |
| Investment Loans |  |  |  |
| Investment Real Estate |  |  |  |
| Other Liabilities |  |  |  |
| Personal Loans |  | 45,951 | 388 |
| Residence Mortgage |  | 250,000 | 1,800 |
| RV and Boat Loans |  |  |  |
|  | Totals | \$319,572 | \$2,588 |

## Other Assumptions:

Inflation (index) rate for income tax table breakpoints = 1.00\%
Joint income tax filing status.
Assumed cost of living increase factor for Social Security benefits $=2.00 \%$
Life expectancy for John is age 95.
Life expectancy for Susan is age 95.
State income tax estimate is based on CO state tax tables.

*Scheduled distributions, interest or dividends taken in cash or amounts taken to meet the IRS minimum distribution requirements.
$R=$ Retirement Age, $L=$ Life Expectancy

## Cash Flow

Retire @65-Assume 6\% ROR - SAMPLE
Future Cash Flow - Income Sources vs Expenses

The bars in the above graph represent the amounts available from...
Earned income (wages \& self employment)
Pension plans and Social Security
Misc (inheritances, sale of residence, investment account systematic withdrawal plans or interest/dividends taken in cash, scheduled retirement account distributions or required minimum distribution amounts.)

The black outline illustrates the annual expenses including ...

- Personal living expenses
- Life insurance and other premiums
- Mortgage and debt repayment
- Planned deposits to investments and retirement accounts
- Miscellaneous expense items

If income from various sources exceeds expenses, the excess is reinvested in savings and investment accounts. If expenses are greater than income, it is assumed that funds required to meet such excess expenses will be drawn from savings and investment accounts to make up the shortage.

## Annual Expense Illustration

Retire @65-Assume 6\% ROR - SAMPLE

* Personal expenses include education fund deposits.
** Itemized deductions do not include mortgage interest, state tax, and medical insurance premiums, which are accounted for in respective expense categories.

## Annual Expenses

Retire @65-Assume 6\% ROR - SAMPLE

## Future Annual Expenses

Your annual expenses represent a number of different items, including personal needs, life insurance premiums, debt repayment, additions to savings and investments, other miscellaneous expenditures and taxes of various types.

The graph should help you visualize the proportionate amount of your total outlay for each of these types of expenditures, and the changing mix over the future years.

## Account Summary

Retire @65-Assume 6\% ROR - SAMPLE

## Allocation of Surplus Cash Flow

In years when there is a surplus of spendable income, the surplus is reinvested into the asset accounts in the proportions shown below. Period 1 covers the years up to age 65 .

## Surplus Allocation in Period 1

Surplus Allocation in Period 2

In years when there is a shortage of spendable income from earnings, pensions, social security, interest and dividends taken in cash, and miscellaneous income sources, the shortage is made up by withdrawals from asset and retirement accounts. It is assumed that funds are taken in the following order - from taxable, equity and other nonqualified, tax-free, tax-deferred and then qualified retirement accounts.

## Retirement Capital Estimate

Retire @65-Assume 6\% ROR - SAMPLE

$R=$ Retirement Age, L = Life Expectancy
**Investment and Retirement distributions include withdrawals from account totals to satisfy "Income needed" shortages from Cash Flow report.

## Net Worth Statement

## Net Worth

Retire @65-Assume 6\% ROR - SAMPLE

Net Worth is the amount of assets remaining if all debts were paid off immediately. Typically over time an individual's net worth starts negative and grows until retirement or a little after then starts to decline as assets are spent.

## Asset Allocation

Retire @65-Assume 6\% ROR - SAMPLE

Asset Allocation does not guarantee a profit or protect against loss in declining markets.

## Risk

Retire @65-Assume 6\% ROR - SAMPLE
In every aspect of life, we are faced with varying degrees of unknown outcomes. These uncertainties in life are sometimes referred to as areas of "Risk". In particular, financial matters are commonly described as either "Safe" or "Risky" or somewhere in between the two extremes.

It is important to recognize that the term "Risk" can refer to more than simply the loss of your money. Some of the different types of risk are described below.

## Loss of Principal:

If you have $\$ 10,000$ invested in a stock, the stock declines in value to $\$ 5,000$, and you sell the stock, then you have suffered a loss of principal. On the other hand, if you do NOT sell the stock while the value is down, and the stock recovers to $\$ 10,000$ then you have not suffered a loss. Time and diversification are keys to mitigating this type of loss.

## Loss of Purchasing Power:

If you own a $\$ 10,000$ certificate of deposit earning $5 \%$ interest, you will receive $\$ 500$ per year interest. Since the account is insured by the FDIC and the interest is guaranteed for a set time frame, this may seem like a "safe" investment. If we experience inflation at the rate of $3 \%$ per year, the purchasing power of the $\$ 500$ income will be reduced after the first year to $\$ 485$, and after 10 years to $\$ 372$. The purchasing power of the $\$ 10,000$ after 10 years will be reduced to $\$ 7,441$. This loss is a permanent one with no chance for recovery unless our economy goes into a protracted deflationary cycle.

## Tax Loss:

Using the same \$10,000 as above, and assuming you are in the $25 \%$ tax bracket, the $\$ 500$ interest would be reduced to $\$ 375$ after taxes. After 10 years, the $\$ 500$ interest after taxes and inflation would provide purchasing power of only $\$ 277$.

## Illiquidity:

If you place all or most of your financial assets into illiquid assets like real estate, mortgages or notes, small business interests or even tax deferred retirement accounts with severe early withdrawal penalties, then you may find that you no longer have control of your financial future. If your personal financial affairs take a turn for the worse due to a disability, loss of employment, death in the family or other unforeseen event, and you cannot readily reposition your assets to meet your new needs, then you are exposed to the risk of not being in control of your financial well being.

Although there are other types of risk that could be considered, the above examples will illustrate that it is important to properly plan and balance your financial assets so that all possibilities are considered. As your financial plan is created, we take into consideration your levels of comfort with different type of assets and with attention to your personal situation and goals.

## Investment Returns

Your financial analysis includes hypothetical portfolio illustrations. To help you understand the potential risks and rewards of investing, the following information shows some historical investment results. While the analysis has used annual rates to illustrate possible scenarios, it does not attempt to specify which asset classes, investment vehicles or combinations of classes you will actually use in your portfolio, as the portfolio mix will generally change several times in the future.

## Historical Stock Market Changes

Historical Stock Market Changes (1995 - Dec 2022)
—— Nasdaq - DJA —— S\&P 500

This chart illustrates the variable nature of stock investing. The scale does not represent any specific value or percent change, but rather shows relative increases or decreases in the indexes. Be aware that stock prices increase or decrease at various times and there is no assurance that profits will be realized in any particular time frame. The above chart does not represent any particular investment portfolio or asset class.

## Historical Asset Class Returns

This table shows the wide range of returns realized on various asset classes for different time periods.

| Asset Class | Annual* <br> Return |
| :---: | :---: |
| Treasury Bills | 3.27\% |
| Bonds - Government | 4.57\% |
| Bonds - Corporate | 6.68\% |
| Stocks - Small Companies*** | 9.19\% |
| Stocks - Large Companies | 9.64\% |
| Inflation | 3.04\% |

| $\mathbf{5}$ Year Return** |  |
| ---: | ---: |
| Maximum | Minimum |
| $10.94 \%$ | $0.06 \%$ |
| $19.48 \%$ | $-0.37 \%$ |
| $21.14 \%$ | $0.64 \%$ |
| $21.16 \%$ | $-1.15 \%$ |
| $28.30 \%$ | $-12.71 \%$ |
| $10.06 \%$ | $-5.41 \%$ |
|  |  |

| 20 Year Return** |  |
| ---: | ---: |
| Maximum | Minimum |
| $7.64 \%$ | $0.53 \%$ |
| $10.66 \%$ | $1.60 \%$ |
| $12.43 \%$ | $2.73 \%$ |
| $11.42 \%$ | $7.50 \%$ |
| $17.70 \%$ | $2.37 \%$ |
| $6.37 \%$ | $1.52 \%$ |
|  |  |

* Annual return is the geometric mean from 1928 through 2022.
** 5 / 20 year return is the highest and lowest rolling return for all the $5 / 20$ year periods from 1928 through 2022.
*** Returns for Stocks - Small Companies is from 1985 through 2022.
These rates of return do not include adjustment for annual fees, commissions, taxes or other expenses that might be incurred in any investment plan. These costs could range from $0 \%$ to as much as $2 \%$ per year or more depending on the type of investment activity and method of managing the accounts. In addition to annual fees and expenses, some investments may include an initial commission, sales charge or set up expense. If fees and expenses are taken into account, the above rates of return would be lower. The rates used in the analysis do not account for any potential fees or expenses. If we assist you in selecting assets for your investment portfolio, a complete description of any fees, expenses, commissions or other costs will be provided for each investment selected.

In any report that illustrates an annuity product, it is assumed that the product is a fixed annuity earning interest as paid by the issuing company. With a fixed annuity you are generally protected against a loss of principal. If a variable annuity should be selected by you for any portion of your portfolio, please be aware that the annual return and corresponding asset value, death benefit and cash values will be based on the underlying investment choice, and could result in a zero or negative rate unless the product has specific terms limiting the loss of principal. The terms for annuity products will be spelled out in the annuity contract. The fees and charges on any annuity contract will vary based on the company and features provided in the contract. They could range from a minimal amount to as much as $2.5 \%$ or more.

## Social Security Terminology

Retire @65-Assume 6\% ROR - SAMPLE

## Primary Insurance Amount (PIA):

This is the amount that all benefits are based on. A worker's PIA is determined by a formula that looks at the top 35 years of earning history, adjusted into today's dollars.

## Full Retirement Age:

If a claimant files at Full Retirement Age, they receive a benefit equal to their full PIA every month. Full Retirement Age is determined by year of birth according to the table on the right. Note that individuals born on January 1 are deemed to have been born in the previous year for determining Full Retirement Age.

## Filing Early:

It is possible to claim Social Security retirement benefits as early as 62, however doing so permanently reduces the amount of benefit. The amount of reduction depends on the claimant's Full Retirement Age and whether they are claiming their own retirement benefit or spousal retirement benefits.

| Year of Birth | Full Retirement Age |
| :--- | :--- |
| $1943-1954$ | 66 |
| 1955 | 66 and 2 months |
| 1956 | 66 and 4 months |
| 1957 | 66 and 6 months |
| 1958 | 66 and 8 months |
| 1959 | 66 and 10 months |
| 1960 and later 67 |  |

## Filing Late:

It is also possible to claim Social Security retirement benefits after Full Retirement Age. There is no benefit to claiming spousal retirement benefits after Full Retirement Age. However, when claiming one's own retirement benefit there are Delayed Retirement Credits applied for each month delayed past Full Retirement Age that equal $8 \%$ annually. This increase stops at age 70 , so that while it is possible to claim benefits after age 70 , there are no further increases after age 70.

## Breakeven Point:

When comparing Social Security claiming strategies, one important detail to be aware of is that the optimal strategy depends, in part, on the life expectancy of the claimant(s). Delaying claiming past 62 increases monthly income but also means giving up income for a certain number of months. The breakeven point is when a certain strategy with higher income has "caught up" to, or provided the same or more lifetime income than, an earlier claiming strategy. The age that this occurs depends on the situation, as well as future Cost of Living Adjustments made by the Social Security Administration, and the opportunity cost of spending money from other sources in order to delay claiming benefits.

## Spousal Benefits:

Spouses, and in certain cases ex-spouses, are entitled to a portion of a worker's retirement benefit after the worker has filed for retirement benefits. If taken at Full Retirement Age this equals $50 \%$ of the worker's PIA. This benefit is reduced when taken early, but can be claimed as early as 62 . Spousal benefits are not eligible for Delayed Retirement Credits so while they can be claimed after Full Retirement Age there is no advantage to

## Restricted Filing: NOTE: ONLY AVAILABLE FOR THOSE BORN ON OR BEFORE JANUARY 1, 1954.

When a worker is eligible for both spousal retirement benefits and their own retirement benefits, and has reached at least Full Retirement Age, they are able to restrict their filing application to one or the other. This is typically done to claim spousal benefits without also claiming their own retirement benefits since their own benefit will then continue to grow while spousal benefits do not increase after Full Retirement Age. Restricting the filing is necessary because the Social Security Administration deems filing for one benefit as filing for all eligible benefits without this election.

## Social Security Breakeven Point

## Saving For College

## Retire @65-Assume 6\% ROR - SAMPLE

Providing educational funds can be one of life's greatest financial burdens. Proper planning for these costs can substantially reduce this burden. There are a number of methods of saving for college. These reports will evaluate a number of the methods.

For more information about college saving strategies and options, or to compare your state 529 plan with other states, check out www.savingforcollege.com

## Lump Sum:

If you already have enough assets available to fund education costs, or the means to quickly pay all potential education costs, you can simply make a lump sum contribution to an education fund. The funds can be set aside in existing investments, or added to a special education funding vehicle, such as a 529.

## Monthly Deposits:

Instead of pre-funding the education costs with a lump sum deposit, you could elect to accumulate funds by making monthly additions to an investment account or 529. If you are funding costs for more than one child, you will also need to consider whether you want to consolidate savings into a single account, or if you want to manage separate funds for each child.

## Method \#1 - Separate accounts for each child:

The benefit of separate account funding method is that the funds may be segregated and identified for each child. The disadvantage is that this method generally will require a much larger monthly deposit in the early years and smaller deposits in the later years. For example, if there are three children starting school at different years, the deposits might look like this:

| Period 1 |  |  |  | (The chart below is an example only and does not relate to your plan.) <br> Period 2 |  |
| :--- | ---: | ---: | :---: | :---: | :---: |
| Child $1=\$ 400$ per month |  | Period 3 |  |  |  |
| Child $2=\$ 350$ per month |  | $\$ 300$ |  |  |  |
| Child $3=\$ 300$ per month | $\$ 650$ |  |  |  |  |
| Total deposits per month $\$ 1,050$ |  |  |  |  |  |

## Method \#2-A single level payment amount used for all children:

If you use a single monthly amount, then the payments would be level throughout the education years. This method is generally easier for most families to afford.
(The chart below is an example only and does not relate to your plan.)

$$
\text { Funding for all children using level payments }=\$ 625 \text { per month }
$$
